

WEIM Resource Sufficiency Evaluation Enhancement Phase 2 (RSEE2), Track 1 Pre-Market Sim Training

Monica Mouanetry, Sr. Customer Readiness Trainer – Presenter
Cindy Hinman, Lead Customer Readiness Trainer - Producer
April 26, 2023

Learning Objectives

- Explain how the e-tag rules will work for the CAISO BAA low-priority exports
- Define requirements and process for submitting an assistance energy designation request

California ISO

RSEE Phase 2 Initiative Milestones

WEIM RSEE2, Track 1 Milestones (On track)

| Milestone Type | Milestone Name | Dates | Status |
|----------------------------------|--|--------------------|----------|
| Settlements Configuration Guides | Post draft Configuration Guides | 05/01/2023 | On track |
| External Training | Deliver external pre-market sim training | April 26, 2023 | On track |
| Market Simulation | Market Sim Window | Starts May 1, 2023 | On track |
| Production Activation | Production | June 1, 2023 | On track |

California ISO

RSEE Phase 2 Track 1 Changes

- Tagging Rules 
- Assistance Energy Transfer
- New Settlements Charge Codes
- OASIS & CMRI reports

Tagging Rules

E-TAG RULES FOR LOWER MARKET PRIORITY EXPORTS FROM THE CAISO

Changes on how LPT exports from the CAISO are tagged?

- **Requires** low-priority exports to be e-tagged as **Firm Provisional Energy (G-FP)**, with a designation of the associated CAISO Real-Time Market priority
- **Identifies** exports with lower priority for CAISO load that can be curtailed according to existing tariff rules within each operating hour and helps with the manual curtailment in an EEA3 event
- **Removes** low-priority exports from inclusion in the CAISO's upward capacity and upward flex RSE that are only scheduled in the Real-Time Market

NOTE:

- DAECON and RTECON are standard HASP awards that are results of economic bids.
- DALPT and RTLPT are self-schedules.
- Tagging as G-FP provides visibility to the Sync BA so that they know that this e-tag is backed by a low priority resource.

What are the CAISO Lower Market Priority Type awards?

| Priority Level | Markets | | RA Determination |
|----------------|---|--|------------------------------------|
| | DAM | RTM | |
| High Priority | ETC/TOR (including the CRN) | ETC/TOR (including the CRN) | Backed by non-supporting resources |
| | DAPT | RTPT | Backed by non-supporting resources |
| Low Priority | DALPT | RTLPT | Backed by supporting resources |
| | DAECON (DA economic exports that clear both RUC and HASP) | RTECON (RT economic exports that clear HASP) | Backed by supporting resources |

DALPT, RTLPT, DAECON, and RTECON are lower market priority exports that may be subject to curtailment because they are backed by supporting resources.

Note: Supporting resource is another term used for Resource Adequacy (RA), which is a CAISO BAA program that ensures adequate physical generating capacity are dedicated to serving all load requirements and is available to meet peak demand and planning and operating reserves, at or deliverable to locations and at times as may be necessary to ensure local area reliability and system reliability.

Example – Create individual e-tags for different Market Priority Types

The Scheduling Coordinator (SC) has market awards to export 100MW out of CAISO BAA; however, the SC has been awarded different Market Priority Types.

| RES_ID | Market Priority Type | MW awarded |
|-------------------------|----------------------|------------|
| ABCD_MALIN500_E_F_ABCD1 | DALPT | 25 |
| ABCD_MALIN500_E_F_ABCD1 | DAECON | 25 |
| ABCD_MALIN500_E_F_ABCD1 | RTLPT | 25 |
| ABCD_MALIN500_E_F_ABCD1 | RTECON | 25 |

The SC creates an individual tag for each awarded Market Priority Type. In this example the SC has created 4 E-Tags, each for 25MW that total 100MW

| Tag ID | MW Tagged | RES_ID | Generation Product Type | Misc. Info CAISO Priority Type |
|---------|-----------|-------------------------|-------------------------|--------------------------------|
| 123ABCD | 25 | ABCD_MALIN500_E_F_ABCD1 | G-FP | DALPT |
| 123EFGH | 25 | ABCD_MALIN500_E_F_ABCD1 | G-FP | DAECON |
| 123IJKL | 25 | ABCD_MALIN500_E_F_ABCD1 | G-FP | RTLPT |
| 123MNOP | 25 | ABCD_MALIN500_E_F_ABCD1 | G-FP | RTECON |

Accounting for Low-Priority Export's in the CAISO BAA's RSE Obligations

Exports are scheduled from...

ISO BAA based on the results of its market clearing process

WEIM BAAs for exports they know can be supported by their own resources

Accounting for Low-Priority Export's in the CAISO BAA's RSE Obligations

For the CAISO, low-priority exports **can clear** the Real-Time Market based on supply from scheduling WEIM energy transfers into the CAISO

- May cause CAISO to fail the RSE even if it has sufficient supply to meet its RSE obligations.
 - This occurs because the RSE does not count WEIM energy transfers into a BAA as available supply but does count a BAA's RSE obligation for non-WEIM exports

How is tagging going to work?

Purchasing Selling Entity (PSE) are required to include the **G-FP** for lower CAISO Market Priority Types in the Market Path (Product field)

| Market Path | | | |
|-------------|---------|----------|-----------|
| PSE | Product | Contract | Misc Info |
| | G-FP | | No |
| | | | No |
| | L | | No |

Backed Supporting Resources - Exports be e-tagged as 'Firm Provisional Energy (G-FP)'

According to the CAISO filed tariff:

“...To accommodate curtailment of lower priority exports in the order set forth in Section 34.12.1, the CAISO will consider any schedule to export energy, other than an export backed by Generation from **non-Resource Adequacy Resource** Capacity, as **firm provisional energy...**”

What is tagging going to look like?

In the **Misc Info** field, a new requirement will be included to provide the 'CAISO Priority Type'

| Physical Path | | | | | | | | | |
|---------------|------|------|-----|-----------------|-------------|----------------|----------|-----------|------|
| BA | TSP | MO | PSE | POR | POD | Sched Entities | Contract | Misc Info | Loss |
| CISO | | CISO | | Source: SP15 | SP15 | | | No | |
| | CISO | CISO | | SP15 | MEAD230 | | | Yes | |
| | CISO | CISO | | MEAD230 | MEAD230 | | | | |
| | WALC | | | MEAD230 | MEAD500 | | | | |
| | WALC | | | MEAD500 | WESTWING500 | | | | |
| | WALC | | | WESTWING500 | WESTWING230 | | | | |
| | WALC | | | WESTWING230 | LIBERTY230 | | | | |
| | SWTC | | | LIBERTY230 | LIBERTY230 | | | No | |
| WALC | | | | Sink: CAP_PUMPS | CAP_PUMPS | | | No | |

Another row will be added as indicated

Misc Info

| Token | Value |
|---------------------|-------|
| CAISO_CONTRACT | NONE |
| CAISO_PRODUCT | ENGY |
| CAISO_RES_ID | |
| CAISO_PRIORITY_TYPE | |

| MISC INFO | |
|---------------------|--|
| Token | Value |
| CAISO_CONTRACT | <Enter your registered CRN (for ETCs, TORs or CVR's) or 'NONE'> |
| CAISO_PRODUCT | <Specify if it is an 'ENGY', 'SPIN', or 'NSPIN'> |
| CAISO_RES_ID | <Enter your registered Resource ID> |
| CAISO_PRIORITY_TYPE | <Enter your CAISO Market Awards Priority Types with the exception of CRNs> |

Tagging Rules

CURTAILMENT DURING EMERGENCY CONDITIONS

What does LPT priority curtailment look like during Emergency Conditions?

CAISO BAA System Operators will curtail these exports within the hour when it does not have enough resources to meet its load and reserve obligations

To accommodate curtailment of lower priority exports, CAISO will consider any schedule to export energy, other than an export backed by Generation from non-Supporting Resource Capacity, as firm provisional energy

Market Operations BPM - Section 6.3.2 Interchange Transactions & E-Tagging

“...for CAISO Day Ahead awards of market priority type DALPT or DAECON for which the CAISO is responsible for the contingency reserves, the corresponding E-Tag Energy Product Type shall equal Firm Provisional (G-FP^[1]). This properly communicates to the sink BA that if, in the event of a contingency to recover contingency reserves or in the event the CAISO is reducing these awards in HASP due to scheduling priorities in the CAISO BA, the E-Tag may be subject to adjustment based on the HASP award, or curtailment based on need following a contingency or resource deficiency in the CAISO when the CAISO is operating in an EEA 3. In addition, the MISC field shall include the relevant market priority type DAPT, DALPT, DAECON, RTPT, RTLPT, RTECON...”

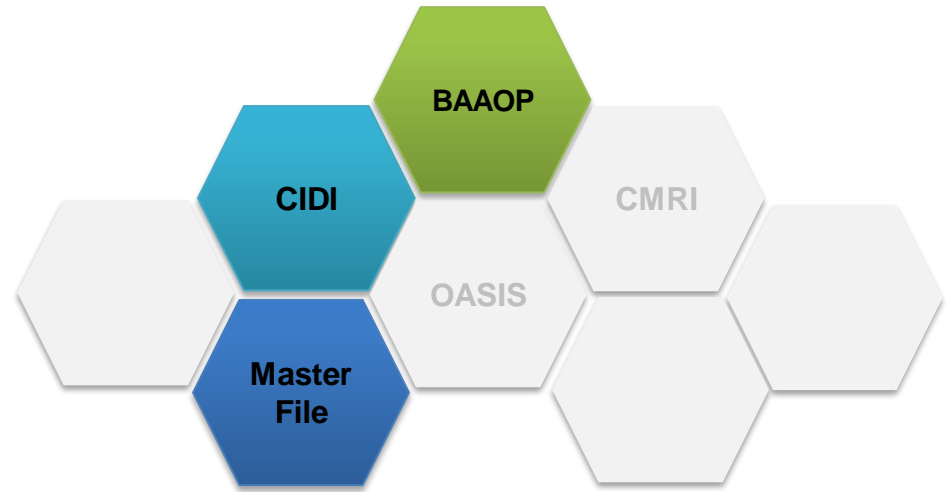

How does the operator determine which LPT to be curtailed first during emergency?

According to the CAISO proposed tariff, CAISO would curtail lower priority exports schedules in the following order:

- 1) Real-Time economic hourly block export schedules that cleared HASP
(RTECON)
- 2) Real-Time Self-Schedule hourly block export schedules **not** backed by Generation from non-Resource Adequacy Capacity and cleared HASP
(RTLPT)
- 3) Day-Ahead hourly block export schedules not backed by Generation from non-Resource Adequacy Capacity that also cleared HASP **(DAECON)**
- 4) Day-Ahead Self-Schedule hourly block export schedules **not** backed by Generation from non-Resource Adequacy Capacity and cleared HASP
(DALPT)

RSEE Phase 2 Track 1 Changes

- Tagging Rules
- Assistance Energy Transfer 
- New Settlements Charge Codes
- OASIS & CMRI reports

New Product

ASSISTANCE ENERGY TRANSFER

What is Assistance Energy Transfer (AET)?

- New product introduced as part of RSEE Phase 2, Track 1
- Allows WEIM BAAs (including CAISO BAA):
 - To **not** have their ETSR transfers limited (per current rules) when they fail the upward RSE Capacity and Flex upward tests
 - Access to extra supply offered by other WEIM Entities

How does it work?

- Each calendar day, the CAISO's market validation team, will act on behalf of the CAISO BAA.
- CAISO will:
 - Review multiple calendar days ahead
 - Have the authority to submit an assistance energy designation request based specific criteria.

AET Opt-in criteria for CAISO BAA

For any hour of Day 8 that has the following, the CAISO BAA has the authority to submit an “opt-in” assistance energy designation request for day 8

- A. $(\text{RA capacity} + \text{RA credits}) \text{ forecast} < (\text{demand forecast} + \text{contingency reserve requirement} + \text{regulation reserve} + 5\% \text{ of demand forecast})$
- B. $(\text{net RA capacity} + \text{RA credits}) \text{ forecast} < (\text{net demand forecast} + \text{contingency reserve requirement} + \text{regulation reserve} + 5\% \text{ of net demand forecast})$

Where
today is
day 1:

If the CAISO BAA has the authority (through criteria “A” or “B” above) to submit an “**opt-in**”/”**opt-out**” assistance energy designation request for day 8 and day 8 is a Friday or a day that directly precedes one or more non-business days:

- **Then** the CAISO BAA also has the authority to submit an “**opt-in**”/”**opt-out**” assistance energy designation request for those non-business days that directly follow day 8

AET participation is optional and comes at a cost

BAAs that opt-in to receive AETs will be subject to the WEIM Assistance Energy Transfer Surcharge when they fail the RSE

- Ex-post surcharge starting at \$1000/MW
- Surcharge will be in addition to the applicable LMP cleared in the market for assistance energy transfers

Sunset by December 31, 2025

How do I opt-in to participate in AET?

Elections to opt-in must be submitted to Master File through the **Customer Inquiry, Dispute, & Information (CIDI)** application

Access CIDI through:

Assistance Energy Designation Request Button

Election to 'opt-in' or 'opt-out' must include:

- 1) Selection of the Assistance Energy Designation Request button
- 2) Specify if the request is to 'opt-in' or 'opt-out'
- 3) Effective Start Date
- 4) Effective End Date

Designation requests must be submitted by 11AM PST, at least 5 business days in advance of the effective start date.

Manual Reference Level Change Request Assistance Energy Designation Request

*Subject: Assistance Energy Transfer request to opt-in

*Description: XYZ is requesting to opt-in for Assistance Energy Transfer
Effective Start Date: 08/01/23
Effective End Date: 08/30/23

Callouts:
- Select the 'Assistance Energy Designation Request' button (points to the selected radio button)
- Specify if the request is to 'opt-in' or 'opt-out' (points to the subject field)
- Specify if the effective start date and end date (points to the description field)

Example – 5 Business Day Requirement

AET Designation requests must be submitted by 11am Pacific Standard Time at least 5 business days in advance of the effective start date.

| Examples | M | T | W | T | F | S | S | M | T | W | T | F | S | S | M | T | Calendar Days |

| Thanksgiving weekend | | | | • | | | | | | | | | | | ✓ | | 11 |

Legend

- Designation request submitted by 11am PST
- ✓ Earliest effective start date

Opting-Out of AET

- No action is needed if you do not want to opt-in
- For each BAAs participating in the WEIM, the default value in the Master File for each trading day will be “opt-out” unless an “opt-in” designation request is submitted and processed

How do we know if a BAA has elected to opt-in for AET?

CAISO BAA

The decision to opt-in by the CAISO will be posted in the Market Notification System (MNS) seven trade dates in advance of the effective start date if the start day is a business day.

This information will be displayed in [OASIS](#) under ATLAS REFERENCE > Messages > System Operation Messages

WEIM BAA

A new 'Assistance' status column will be available in the BAAOP application to display a list of WEIM BAAs that have elected to opt-in.

You can also view the AET flag in the Settlements Statement file for tracking your shadow settlements.

RSEE Phase 2 Track 1 Changes

- Tagging Rules
- Assistance Energy Transfer
- New Settlements Charge Codes
- OASIS & CMRI reports

New Settlements Charge Codes

CC 6476 REAL-TIME AET SURCHARGE

CC 6479 REAL-TIME AET ALLOCATION

CC 6476 - Real Time Assistance Energy Transfer Surcharge

- New charge code:
 - Calculate the RT Assistance Energy Transfer Surcharge assessed for insufficient WEIM BAAs
- Receive data for the last binding RTBS run for hour T-40, which includes the corrected data
- Settlements shall consume on an hourly basis the RTM Bid Cap (\$1,000/MWh or \$2,000/MWh) from the Market

[Settlements and Billing \(PRR 1492\) - Configuration Guides for CC 6476 & CC 6479](#)

CC 6476 - Real Time Assistance Energy Transfer Surcharge

CAISO BAA (Opt-In)

Settlements shall sub-allocate the charged Assistance Energy Transfer Surcharge cost for CAISO BAA to SCs, pro rata to their Measured Demand in relationship to CAISO BAA Measured Demand

WEIM BAA (Opt-in)

Settlements shall allocate the charges to the Entity SC and Entity SC can sub-allocate at their discretion

For BAAs that 'opt-out' of AET, the applicable Real Time Assistance Energy Transfer shall be set to zero

[Settlements and Billing \(PRR 1492\) - Configuration Guides for CC 6476 & CC 6479](#)

CC 6479 - Real Time Assistance Energy Transfer Allocation

- New charge code:
 - **Allocate** assistance energy transfer revenue between WEIM BAAs that provided extra supply
- Sum of Real-Time Assistance Energy Transfer surcharge revenue that are collected from all insufficient WEIM BAAs
 - allocated to all other sufficient WEIM BAAs that have passed both RSE Capacity Test and Flexible Ramping Test
 - pro rata to their net exports beyond base transfer
- Sub-allocate surcharge revenue by CAISO to SCs providing incremental net RT imbalance energy (FMM IIE, RTD IIE and/or UIE)
 - excludes non-participating loads. (for CAISO BAAs)

[Settlements and Billing \(PRR 1492\) - Configuration Guides for CC 6476 & CC 6479](#)

Scenario – A (Net Import is less than Failed Capacity Quantity)

If a BAA:

- Opts-in for AET
- Fails their RSE tests (RSE Capacity Up or Flex Ramp Up)

Then:

If the net imports (any incremental transfer energy from the base schedule) < RSE failed qty, the surcharge qty = Difference between net imports - applicable credit (ABC Reg up/Regulation up minus no pay for CISO).

Example A

BAA failed quantity = 100MW

BAA net import = 80MW

BAA Reg up = 20MW

Surcharge qty = 60MW

Scenario – B (Net Import is greater than Failed Capacity Quantity)

If a BAA:

- Opts-in for AET
- Fails their RSE tests (RSE Capacity Up or Flex Ramp Up)

Then:

If the net imports is $>$ Failed Capacity Quantity, the surcharge quantity is capped at the failed quantity.

Example B

BAA failed quantity = 100MW

BAA net import = 150MW

Surcharge qty = 100MW

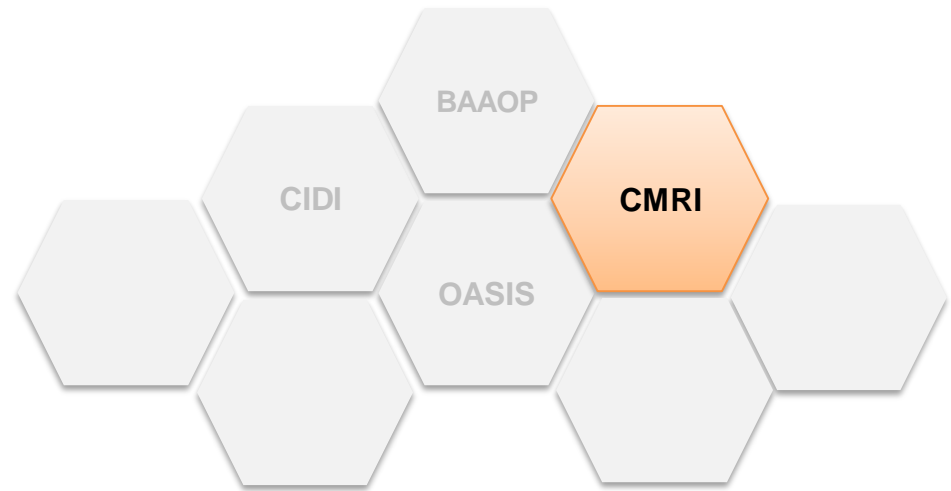

Additional items to note...

- The AET Election Bill Determinant is published in MRI-S through settlement statement files.
- The formula for the AET surcharge will be included in the Settlements & Billing BPM.
- When a WEIM BAA opts-in and if your Available Balancing Capacity (ABC) Reg up ultimately reduces your net import to 0, your surcharge quantity will be 0.
- The ABC credit does not trigger unless the surcharge is applied to the net WEIM transfers into the Balancing Authority Area. This only happens if the net WEIM transfers into the BAA are lower than the RSE failure amount.
- If your net imports are less than your failed capacity, the surcharge will be the difference between your net imports and ABC reg up (capped at 0). If your net imports are higher than your failed capacity qty then your surcharge is capped at the failed capacity quantity.
- ABC Reg up for WEIM Entities or Reg up for CAISO BAA does not count towards the Assistance Energy Transfer Quantity that is subject to a surcharge.

California ISO

RSEE Phase 2 Track 1 Market Simulation

Market Simulation Timeline

- Register for Market Sim by email MarketSim@caiso.com.
 - Registration deadline was **April 23, 2023**
 - You can still register!
 - Run the scenarios
 - Validate expected market sim scenario outcomes
- Market Sim meetings start on **April 27, 2023**
 - View the CAISO public calendar for full schedule
- Market Sim starts on **May 1, 2023**

Structured Scenario 1 – Assistance Energy Transfer

| Structured Scenario 1 – RSEE2 T1 | | |
|----------------------------------|---------------------------------|---|
| 1 | Description | Facilitate simulation of assistance energy transfer opt-in functionality. |
| | ISO Actions | Facilitate failure of upward capacity test and/or flexible ramping test for WEIMs signed up for market sim. |
| | WEIM Market Participant Actions | 1) WEIM market participants should opt-in for the assistance energy transfer functionality 2) Facilitate conditions to fail upward capacity test and/or flexible ramping test. 3) Submit ETSR Limits |
| | ISO Market Participant Actions | N/A |
| | Expected Outcome | When opted in, allow that BAA to receive WEIM assistance energy transfer by not enforcing the BAA Import transfer limit in the base scenario. Verify the RSE failure capacities and RTM bid cap in CMRI and OASIS. |
| | Anticipated Settlement Outcome | Verify assistance energy transfer charges and revenue allocation |
| | Expected Settlement Outcome | |

Structured Scenario 2 – Firm Provisional (G-FP) e-tags

| Structured Scenario 2 – RSEE2 T1 | | |
|----------------------------------|---------------------------------|--|
| 2 | Description | Facilitate submission of G-FP Export e-Tagging. |
| | ISO Actions | N/A |
| | WEIM Market Participant Actions | Market Participants should e-tag several export resources as “Firm Provisional Energy (G-FP)”. |
| | ISO Market Participant Actions | N/A |
| | Expected Outcome | Market Participants verify G-FP e-tags in their own Web Smart Tag system. CAISO Operators will verify ITS for G-FP e-tags. |
| | Anticipated Settlement Outcome | N/A |
| | Expected Settlement Outcome | N/A |

Questions?

Recap

- ❑ New tagging rules for lower priority exports in the CAISO BAA.
 - The G-FP market priority type designation will send a signal to the Sync BA to let them know that the CAISO will appropriately curtail the resource in the day-ahead/real-time market to minimize the export of supporting resource capacity dedicated to CAISO load during tight system conditions.
 - This new e-tag requirement impacts both CAISO BAAs and WEIM BAAs. |
 - You can see if you're the e-tag is designated as G-FP in your webSmart tag software.

- ❑ New requirement to specify the 'Priority Market Type' to Generation – Firm Provisional (G-FP) for lower priority e-tags for the following market awards types: (DALPT, DAECON, RTLPT, RTECON).

- ❑ New voluntary Assistance Energy Transfer product is available for WEIM BAAs and CAISO BAA with specific submission requirements and will sunset by 12/31/25.

- ❑ Creation of new charge codes (CC 6476 - Surcharge and CC – 6479 Revenue allocation).

- ❑ OASIS has one new report (Market Bid Cap) and updates to two existing reports.

RSEE Phase 2

BPM and Tariff Impacts

| Project Information | Details |
|---------------------|---|
| BPM Changes | Western Energy Imbalance Market Settlements and Billing Market Instruments Market Operations |
| Tariff Change | 29.11 Settlements and Billing for EIM Market Participants (Energy Imbalance Market) 29.34 EIM Operations (Energy Imbalance Market) 34.12.4 Real-Time Market |

Impacted Systems

| Impacted Systems | Details |
|---|--|
| Master File | Definition of BAA Assistance Energy Transfer Opt-in or opt-out flag |
| Balancing Authority real-time Operations Portal (BAAOP) | Adding a new 'Assistance' column to display the status for WEIM BAAs that have 'opt-in' for Assistance Energy Transfer. |
| Settlements | Adding two new charge codes |
| Open Access System, Interface (OASIS) | Adding new report labeled, Market Bid Cap Modifying existing reports, 'RSE Capacity' and 'Flex Ramp Results' to include data type elements from CMRI reports. |
| Customer Market Results Interface (CMRI) | Retiring 'Data Type' elements from 2 existing CMRI reports. |
| Customer Inquiry Dispute Information (CIDI) | Adding new 'Assistance Energy Designation Request' button. |

ABOUT US PARTICIPATE STAY INFORMED PLANNING MARKET & OPERATIONS RULES ISO EN ESPAÑOL

Release planning analyzes the impact of initiatives

The release planning process assesses market initiative implementation impacts to determine target timeframes, project milestones and other resource considerations. It is a collaborative process between the ISO and market participants to optimize the costs and benefits of the implementation approach prior to committing resources.

Plans and schedules

- Implementation Milestones 3/14/2023 11:08

Meetings

- Market performance and planning forum
- Release user group web conferences
